Orbit

Four takes on the icon: the main orb alone, then with the section orbs circling it.

ICON 1

Orb, dark

 29 pt, Settings and Spotlight

The simplest option and the boldest at small sizes. It’s exactly what users press in the app, so the icon and the controller are one object.

ICON 2

Orb, light

 29 pt, Settings and Spotlight

The same orb on warm white. It feels softer and stands out on dark wallpapers, but the glow is weaker, so the colours do less work.

ICON 3

Constellation

 29 pt, Settings and Spotlight

All eight section orbs on a ring around the main one, which reads literally as “Orbit”. The satellites shrink to dots at 29 pt, which is fine there.

ICON 4

Tilted orbit

 29 pt, Settings and Spotlight

Three satellites on a tilted path that passes in front of the orb. It has more depth and motion, and it’s less busy than the full ring.
